

Clean Set of Claims

1. A server adapted to provide broadcast information relevant to a locality to a plurality of localities, said server comprising:

a processor;

a call related information/broadcast information stream relevant to a locality lookup table accessible by said processor and associating call related information entries with respective broadcast information streams relevant to a locality;

a plurality of stored broadcast information streams of current news relevant to a locality;

wherein said processor is adapted to identify a specific one of said plurality of stored broadcast information streams relevant to a locality for downloading a real-time audible representation of said one of said plurality of stored broadcast information streams relevant to a locality to a caller based only on call related information received with respect to an incoming call.

19. A method of selecting a broadcast information stream relevant to a locality, comprising:

receiving call related information relating to a calling party;

determining a desired one of a plurality of broadcast information streams of current news relevant to a locality for downloading to said calling party based only on said call related information; and

downloading a real-time audible representation of said desired one of said plurality of broadcast information streams relevant to a locality to said calling party based on said call related information.

30. Apparatus for selecting a broadcast information stream relevant to a locality, comprising:

means for receiving call related information relating to a calling party;

means for determining a desired one of a plurality of broadcast information streams of current news relevant to a locality for downloading to said calling party based only on said call related information; and

means for downloading a real-time audible representation of said desired one of said plurality of broadcast information streams relevant to a locality to said calling party based on said call related information.

---

32. The server adapted to provide highly localized broadcast information to a plurality of localities according to claim 1, wherein:

said current news is weather forecast information.

33. The method of selecting a highly localized broadcast information stream according to claim 19, wherein:

said current news includes weather forecast information.

34. The apparatus for selecting a highly localized broadcast information stream according to claim 30, wherein:

said current news includes weather forecast information.
